TESTIMONIALS

"The student engagement was great, the instructions were simple to follow, and the students were problem-solving, troubleshooting, collaborating, and thinking critically. In addition, they were implementing the scientific method and were completing all these tasks while having fun."

"All students were engaged for the entire class period and were excited to work on this activity."

"My students who don't usually participate much in writing and discussion-based activities were eager to participate in this activity. I could tell that several groups were proud of their work, and that's always a great feeling."
