

Cell vs Cell Directions

Students are to compare the parts of a cell to the parts and apps of a cell phone. They must first look up definitions of the human cell, then compare each component to apps or features/accessories of a cell phone. You can grade as a project, or not be graded at all and used as an activity.

There are instructions for students on the PowerPoint slides. Digital, printable, or drawing. This can also be a fun group project during class, using poster board.
