

Using Glo Germ

SURFACE CLEANING

1. Lightly dust a small amount of Glo Germ Powder over an entire surface area.
2. Clean the surface until all visible Powder disappears.
3. Pass the UV lamp over the surface, the remaining traces of Powder will glow on the areas that were not cleaned thoroughly.

*Please Note: Glo Germ products will not show actual germs. The “glowing germs” you will see is the Glo Germ product itself. All of our products are intended to simulate germs and bacteria.
