

# Hand Washing Flyer

Students will now make their own handwashing flyer by using their notes from the demonstration and information gathered from the internet (if available). Explain to students that pathogens can be spread from one person. These pathogens may cause illness and when spread from to the next are considered contagious.

Students can use Microsoft Publisher to create their flyer.

Each flyer must include:

1. Why we wash our hands
2. Tips for proper hand washing.
3. A list several common diseases associated with poor hand hygiene.

Flyers may later be used on campus during cold and flu season
